

#### **Chemical Management in Textile Factories**

# Helmut Krist GIZ Consultant

on behalf of giz FABRICS and adelphi consult GmbH Berlin

#### Module II: Agenda

- ✓ Importance of chemical management
- Understanding standard labels and their implications
- ✓ Key aspects of chemical management system.
- Storage and transportation of different hazardous chemicals
- ✓ Handling of unused/expired chemicals
- ✓ Documentation for the storage, incidents, and mitigation (with templates)

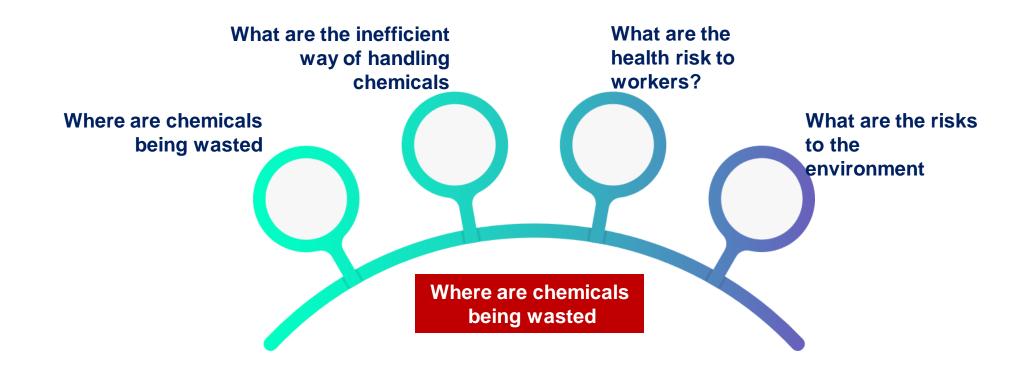

### **Importance of Chemical Management**

# **Importance of Chemical Management**

- Chemicals are crucial components of major process industries (e.g. textiles)
- Effectively managed chemicals can deliver financial and environmental benefits.
- Chemicals are necessary to achieve characteristics and qualities in a product,
- ✓ However,
  - There is growing concern about harmful chemicals in the products and their adverse effects on health and environment.
  - the frameworks for standards, legal and other requirements become increasingly demanding

# **Elements of Chemical Management**

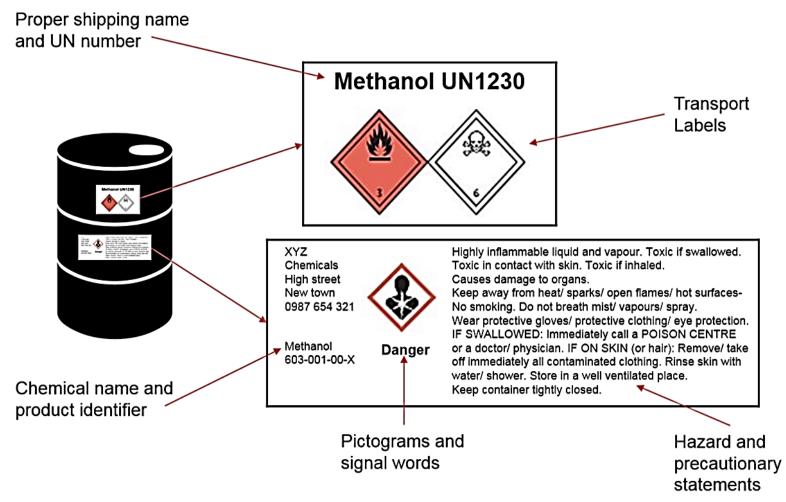

#### **Elements of Good Chemical Management**

- Establish purchase policy and practices
  - Control exposure and releases
    - Select and use personal protective equipment
      - Provide training, procedures and instructions
        - Improve chemical handling
          - Safe chemical storage
            - Safe chemical transport
              - Plan and prepare for chemical emergencies
                - Manage and dispose chemical waste

# **Chemical Labelling and Marking**

- Every single chemical container in the factory shall be clearly identified with printed labels on the containers.
- Chemical containers that have not been labelled shall not be used until the relevant information is obtained from the supplier or other reliable sources.
- Labels on the containers shall follow the standard of the Globally Harmonized System of Chemical Classification and Labelling (GHS) or a similar uniform and recognized system.
- Besides the GHS label requirements, the following information should also be present on the container label: (i) The lot number or batch number (ii) Date of manufacture and expiry date.
- Proper labelling shall also be applied to the chemical waste containers.

#### **Chemical Labelling and Marking**

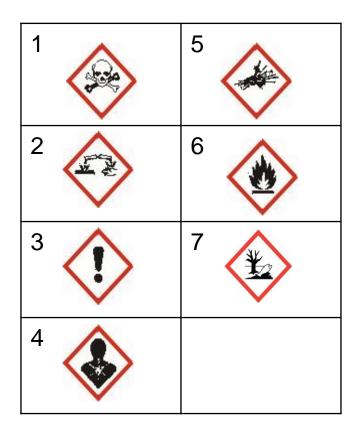

Source: UNIDO IAMC toolkit, 2015

#### **Basic Part of GHS Compliant Label**

#### **Exercise**

#### Match the labels with the description

Danger Fatal if	Danger Toxic if	Danger Causes severe skin burns/eye damage
Warning Cause skin irritation	Danger Explosive 	Danger May cause cancer
Warning Very toxic to acquatic life	Danger Extremely flammable	Warning Harmful if

# Safety Data Sheet (SDS)

#### There are 16 standard sections

- SECTION 1: Identification of the substance/mixture and of the company
- SECTION 2: Hazards identification
- SECTION 3: Composition/information on ingredients
- SECTION 4: First aid measures
- SECTION 5: Firefighting measures
- SECTION 6: Accidental release measure
- SECTION 7: Handling and storage
- SECTION 8: Exposure controls/personal protection

- SECTION 9: Physical and chemical properties
- SECTION 10: Stability and reactivity
- SECTION 11: Toxicological information
- SECTION 12: Ecological information
- SECTION 13: Disposal considerations
- SECTION 14: Transport information
- SECTION 15: Regulatory information
- SECTION 16: Other information

# Safety Data Sheet (SDS)

#### Use of SDS Document:

- Identity of the substance
- Its physical, health and environmental hazards
- Storage, handling, transport and final disposal
- Safety instructions for workers
- Selection of exposure controls and PPE
- Emergency procedures (e.g. fire fighting, first aid, spill control)
- ...so on

#### **Chemical and Waste Inventories**

Provides a comprehensive list of the chemicals entering the production facility.

In the context of resource efficient management of chemicals, the purpose of chemical inventory goes beyond warehousing requirements:

- It serves as key reference
- It can be used for identification and assessment of environment, health & safety hazards and risk
- It can be used as chemical management information tool

#### **Chemical and Waste Inventories**

Template 1: Chemical Inventory List

Factory Location:

Location:

Updated by: Date:

Area/ Process	Chemical/ Trade name	Manufacturer name	Formulator /Supplier name	Purchase information			CAS/ EC number	MRSL/RSL compliant (Yes/No)	SDS available (Yes/ No)	Function/ Use of the chemical	R-phrases/ Hazard statement	l	azar type	- 1	PPE required ( <u>as</u> per SDS)	Storage condition (as per SDS)	Chemical In-stock	Chemical Used
				Date of	Date of	Batch/Lot						Р	н	E				
				purchase	expiration	number												

#### **Elements of Inventories**

#### Eco-map:

Type and location of chemicals and chemical (containing) waste

#### Process flow diagram and mass-balancing

Types of chemicals

Processes involving chemicals

Quantities of inputs and non-product outputs

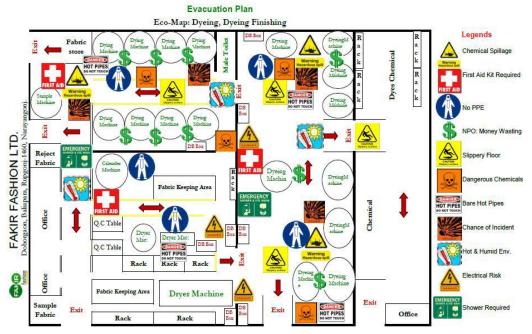

#### Safety data sheets/technical data sheets/labels and markings

Hazardous/non-hazardous

Type of hazards

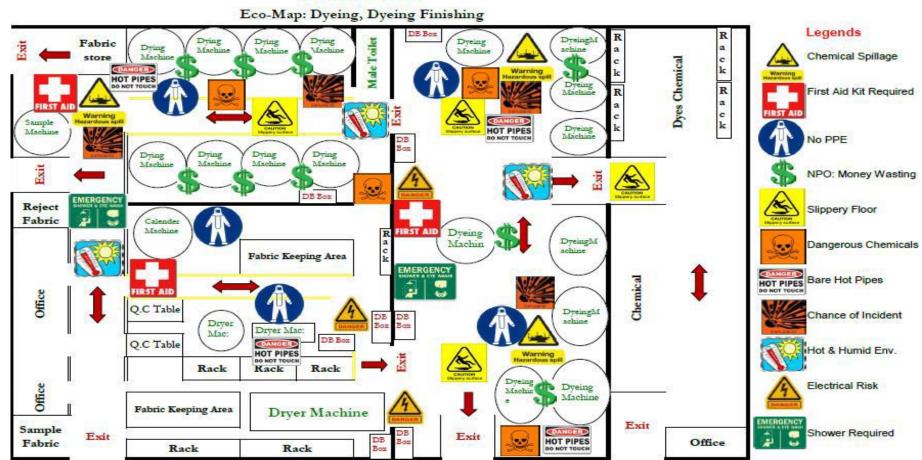

#### **Eco Mapping**

- simple, practical tool for visualization of process flows
- good to use in resource efficiency, OSH and/or chemical management for
  - identifying and documenting the prevalent situation and issues
  - identifying and analysing common issues and pri-
  - selecting and planning areas for improvement
  - monitoring progress of implementation
  - auditing and reporting

### **Eco Mapping**

#### **Evacuation Plan**

e-REMC toolkit by Deutsche Gesellschaf für Internationale Zusammenarbeit (GIZ) Source:

# **Concept of Process Flow Mapping**

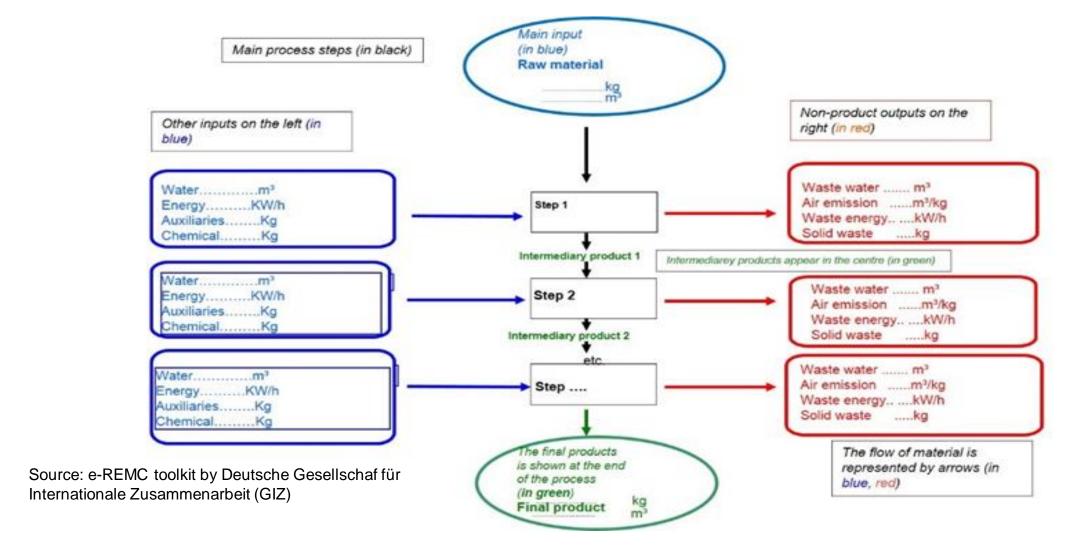

Apply systematic step-by-step approach towards understanding process and chemical flows;

Understand where chemicals and chemical (containing) wastes are present and stored within your site;

Set boundaries regarding external operations that your company can/should/wants to influence. For example,

- Procurement of chemicals and products containing chemicals
- Transport/shipment and delivery of products and chemicals to/from company as
- Disposal of waste products (air emissions, solid waste, wastewater)

#### **Concept of Process Flow Mapping**

# Best practices for storage

- Closure of containers
- Condition
- Compatibility
- Size (not larger than 55 Gallons)
- Labelling

21

# Storage of hazardous chemicals

## Best practices for storage of hazardous chemicals and waste

- Ensure all containers of hazardous chemicals are properly labeled with the identity of the hazardous chemical(s) and appropriate hazard warnings.
- Segregate all incompatible chemicals for proper storage of chemicals by hazard class. In other words, store like chemicals together and away from other groups of chemicals that might cause reactions if mixed.
- Do not store chemicals alphabetically except within a grouping of compatible chemicals.
- Flammable materials should be stored in an approved, dedicated flammable materials storage cabinet or storage room if the volume exceeds ten gallons. Keep cabinet doors closed.
- Chemicals should be stored no higher than eye level and never on the top shelf of a storage unit. Do not overcrowd shelves. Each shelf should have an anti-roll lip.
- Avoid storing chemicals on the floor (even temporarily) or extending into traffic aisles.

Source: CDC, USA

## Best practices for storage of hazardous chemicals and waste

- Liquids should be stored in unbreakable or double-contained packaging, or the storage cabinet should have the capacity to hold the contents if the container breaks.
- Store acids in a dedicated acid cabinet. Store highly toxic or controlled materials in a locked, dedicated poison cabinet.
- Volatile or highly odorous chemical shall be stored in a ventilated cabinet.
   Chemical fume hoods shall not be used for storage as containers block proper air flow in the hood
- All chemicals should be labeled and dated upon receipt in the lab and on opening. This is especially important for peroxide-forming chemicals such as ethers, dioxane, isopropanol, and tetrahydrofuran.
- Solutions should be labeled and dated when prepared.

Source: CDC, USA

#### **Disposal of Unknows**

- If an unknown chemical is discovered contact immediately for professional help for identification and analysis
- The chemical must be tested for flammability and toxicity
- Once it is confirmed that the chemical is none of those, it needs to be tested for acidity and alkalinity of the sample
- Finally, it can be disposed after neutralization of the sample
- However, if it is discovered to be flammable or, toxic, professional disposal bodies should be contacted

# Gaps

- Implementation of procedures for handling hazardous materials;
- Procedure and standards for recycling of hazardous materials;
- Conditions for sale or transfer of hazardous materials for recycling;
- Treatment, storage and disposal facilities for hazardous wastes;
- Monitoring packaging labeling and storage of hazardous materials;
- Transportation of hazardous materials and manifest systems;
- Verifying reporting, records and returns;
- Legal liabilities, legal provisions and appeals
- Certified professional support for hazardous waste management service/facilities

#### Addressing the gaps

- By identifying and updating the rigorous list of hazardous waste that are being imported and generated in Bangladesh,
- Preparing an updated guidelines for making sure of proper management of those waste,
- Handling, recycle, storage or, disposal methods are to be established for each type of waste,
- Inspecting the storage facilities at the factories and ensuring their usability before issuing waste chemical import certificate

#### Addressing the gaps

- Training of professional in the field of waste management (to provide accredited services to the factories who will need support regarding hazardous waste management),
- Detail Record keeping and maintaining standard safety practices at the industries,
- Making rules easier to understand for implementation.

#### **Exercise: Good Storage Practice**

#### Identify and note down as many chemical related issues as you can

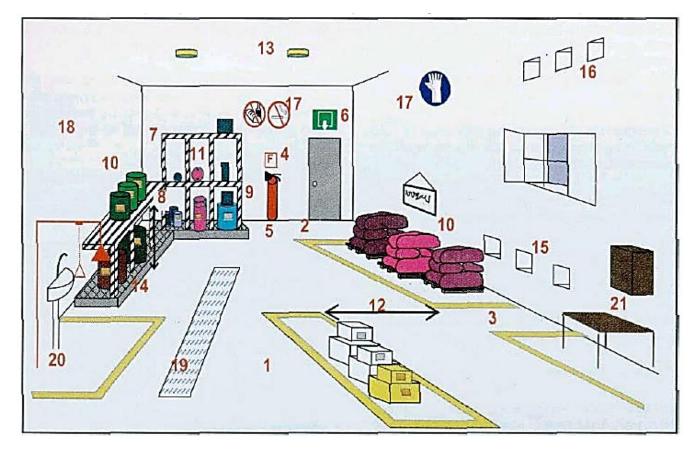

Source: e-REMC materials by Deutsche Gesellschaf für Internationale Zusammenarbeit (GIZ)

# **Common Causes of Incidents During Storage of Chemicals**

- Lack of awareness of the properties of the dangerous substances;
- Operator error, due to lack of training and other human factors;
- Inappropriate storage conditions with respect to the hazards of the substances;
- Inadequate design, installation or maintenance of buildings and equipment;
- Exposure to heat from a nearby fire or other heat source;
- Poor control of ignition sources, including smoking and smoking materials, hotwork, electrical equipment etc; and
- Horseplay, vandalism and arson.

#### **Good Storage Practice**

Source: e-REMC materials by Deutsche Gesellschaft für Internationale Zusammenarbeit (GIZ)

- 1. Flat floor
- 2. Lockable doors/prohibited entry
- 3. Clearly designated area for different chemical types
- 4-5. Fire safety
- 6. Clearly marked emergency exits
- 9. Secondary confinement for liquid chemicals
- 10. Proper labeling of containers/area
- 12. Enough space for trolly/forklift
- 14. Proper shelfing system
- 15-16. Adequate ventilation
- 17. Available PPE
- 18. Physically separated from other areas

## **Separate Incompatible Chemicals**

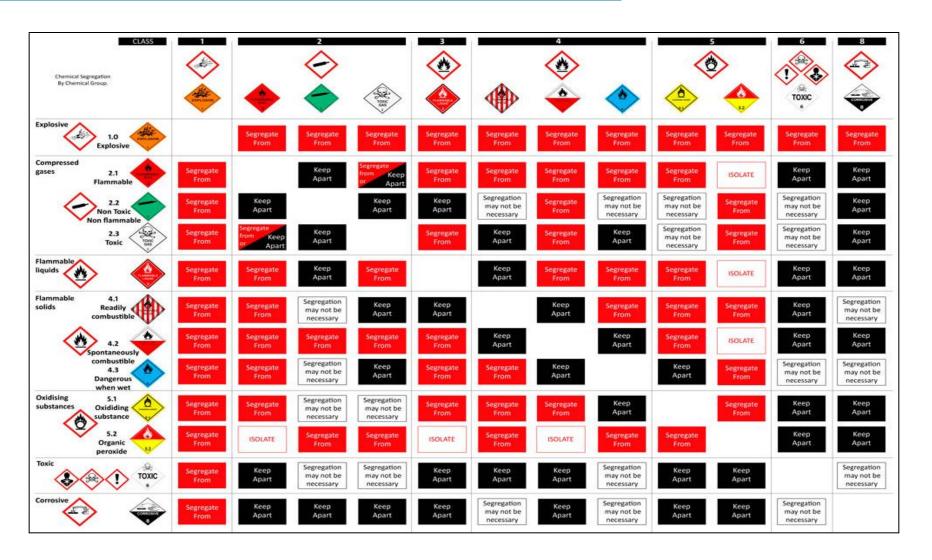

#### Most common hazard classes include:

- flammables/ combustibles
- corrosive acids
- corrosive bases
- Toxics
- highly toxics
- oxidizers
- compressed gases
- cryogens
- pyrophorics
- water reactives
- explosives

#### **Caution:**

- Place groups of compatible chemicals together.
- Segregate chemicals that are in storage according to compatibility.
- Oxidizers (hydrogen peroxide, nitric acid, perchloric acid, etc.) need to be stored separately from organic chemicals (fuels).
- Particularly dangerous chemicals should be isolated in storage (e.g. hydrofluoric acid, pyrophoric materials, etc.)

### **Separate Incompatible Chemicals**

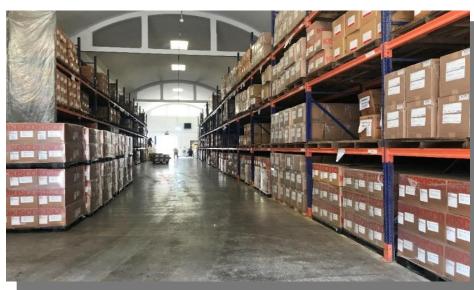

Gesellschaf für Deutsche Zusammenarbeit (GIZ) toolkit by REMC Internationale Source:

# **Good Storage Practice**

Source: e-REMC materials by Deutsche Gesellschaf für Internationale Zusammenarbeit (GIZ)

## **Quick Check on Storage Layout**

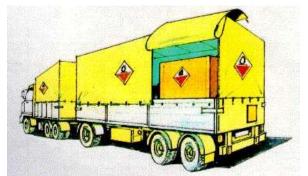

- Storage layout and siting of stores prepared in advance/available
- Areas for storage and movement assigned, taking into account
  - Chemical segregation requirements and storage classes
  - Maximum storage quantities to be expected
  - Regulatory and supplier recommended chemical storage limits (quantity, type) and arrangements (e.g. divider walls, secondary containments)
  - Special storage requirements (see safety data sheets)
  - Space requirements for safe movement of personnel and fork-lifts
  - Space required for allowing for storage and movements on pallets for easier rearrangement
- Colour floor markings used to clearly demarcate different storage and movement areas

## **Safe Transport of Chemicals**

Procedures and practices on the safe transport of chemicals (and waste):

- Transport of chemicals and chemical waste to/from your company
- Receiving and unloading of chemicals
- Internal transport and conveyance of chemicals and waste (e.g. transport to warehouse, from warehouse to production areas, within production areas,...)

Source: ILO-CIS

## **Safe Transport of Chemicals**

Major aspects of safe transport of chemicals are:

- making and labeling of packages (during transport)
- vehicle requirements (such transport documents, transport, emergency provisions)
- qualification of drivers (e.g. special license, training)
- loading requirements with regard to quantity, mixing with other loads (e.g. compatibility issue)
  - Secure loading of containers and cylinders (protection of valves!)
  - No overloading or avoidance of heavy manual loads

## **Safe Transport of Chemicals**

### Internal transport and distribution of chemical containers:

- Secure loading of containers and cylinders (protection of valves!)
- No overloading or avoidance of heavy manual loads
- Smooth and wide enough passage ways to avoid excessive shocks or local stress on containers
- Forklifts to be equipped with a fire extinguisher and an electrically conductive strip for earthing static electricity
- Special training and instructions to operators of transport vehicles (such as speed limits, maximum loads, routes)

## Handling of Unused/Expired Chemicals

- Unused and/or expired chemicals can be considered as chemical waste and handle accordingly.
- Store unused/expired chemicals in appropriate containers; plastic bottles are preferred over glass for storing hazardous waste when compatibility is not an issue.
- Segregate unused chemicals by compatibility, and not alphabetically.
- Solid wastes can be incinerated if the facility available.
- Liquid wastes can be neutralized and then treated in ETP.

## Handling of Unused/Expired Chemicals

Chemical waste containers must be labeled with the following information:

- Full chemical name and quantity of the waste. For mixtures, each chemical must be listed. Abbreviations, acronyms and ditto marks ("") to replace words are not allowed.
- Date of waste generation;
- Place of origin (department, unit);
- Relevant person's name and telephone number;
- · Bottle number assigned on corresponding waste sheet; and

## **Waste Inventory**

- Hazardous substances contained in the waste identified?
- Hazardous properties of those substances known?
- Threshold concentrations of those substances for making waste hazardous verified?

#### Example: Color code used in European Waste List

RED: "Absolute Entries" – Hazardous waste regardless of any threshold concentrations (A)

BLUE: "Mirror Entries" – Hazardous waste only if dangerous substances are present above threshold concentrations (M)

BLACK: "Non-hazardous Entries" - Non Hazardous wastes

# **Waste Inventory: Typical Template**

Waste Name	Category / Type	Source Process	Storage Area	Yearly Quantity	Associated Hazards	Disposal Method (actual/recommended	Waste Disposal Vendor Address	License Number	License Validity Time
								,	

19-09-2023

## **Example: European Waste List**

Criteria that render wastes hazardous according to European Waste Regulation

Code	Designation	Note		
H 1	Explosive	Substances and preparations which may explode under the effect of flame or which are more sensitive to shocks or friction than dinitrobenzene.		
H 2	Oxidizing	Substances and preparations which exhibit highly exothermic reactions when in contact with other substances, particularly flammable substances.		
Н ЗА	Highly Flammable	Liquid substances (including extremely flammable liquids) and preparations having a flashpoint of below 21°C, or Substances and preparations which may become hot and finally catch fire in contact with air at ambient temperature without any application of energy, or Solid substances and preparations which may readily catch fire after brief contact with a source of ignition and which continue to burn or to be consumed after removal of the source of ignition, or Gaseous substances and preparations which are flammable in air at normal pressure, or Substances and preparations which, in contact with water or damp air, evolve highly flammable gases in dangerous quantities.		
Н 3В	Flammable	Liquid substances and preparations having a flashpoint equal to or greater than $21^{\circ}\text{C}$ and less than or equal to $55^{\circ}\text{C}$ .		
H 4	Irritant	Non-corrosive substances and preparations which, through immediate, prolonged or repeated contact with the skin or mucous membrane, can cause inflammation.		
H 5	Harmful	Substances and preparations which, if they are inhaled or ingested or if they penetrate the skin, may involve limited health risks.		
H 6	Toxic	Substances and preparations (including very toxic substances and preparations) which, if they are inhaled or ingested or if they penetrate the skin, may involve serious, acute or chronic health risks and even death.		
H 7	Carcinogenic	Substances and preparations which, if they are inhaled or ingested or if they penetrate the skin, may induce cancer or increase its incidence.		
H 8	Corrosive	Substances and preparations which may destroy living tissue on contact.		
H 9	Infectious	Substances containing viable micro-organisms or their toxins which are known or reliably believed to cause disease in man or other living organisms.		
H 10	Toxic for re- production	Substances and preparations which, if they are inhaled or ingested or if they penetrate the skin, may produce or increase the incidence of non-heritable adverse effects in the progeny and/or of male or female reproductive functions or capacity.		
H 11	Mutagenic	Substances and preparations which, if they are inhaled or ingested or if they penetrate the skin, may induce hereditary genetic defects or increase their incidence.		
H 12	-	Substances and preparations which release toxic or very toxic gases in contact with water, air or an acid.		
H 13	Sensitizing	Substances and preparations which, if they are inhaled or if they penetrate the skin, are capable of eliciting a reaction of hyper-sensitization such that on further exposure to the substance or preparation, characteristic adverse effects are produced.		
H 14	Ecotoxic	Substances and preparations which present or may present immediate or de- layed risks for one or more sectors of the environment.		
H 15	-	Substances and preparations capable by any means, after disposal, of yielding another substance, e.g. a leachate, which possesses any of the characteristics listed above.		

# **Example: Textile Industry**

EWL Code	European waste list (EWL) Classification	Н	н	Y
		(EU)	(Basel)	(Basel)
04 02	Wastes from the textile industry			
04 02 09	Wastes from composite Mats (impregnated textile, elastomer, plastomer)			
04 02 10	Organic matter from natural products (for example grease, wax)			
04 02 14*	Wastes from finishing containing organic solvents	H3, H5	H3, H4.1	Y42
04 02 15	Wastes from finishing other than those mentioned in 04 02 14			
04 02 16*	Dyestuffs and pigments containing dangerous substances	H7, H3, H5, H8	H3, H11, H4.1	Y12
04 02 17	Dyestuffs and pigments other than those mentioned in 04 02 16			
04 02 19	Sludges from on-site effluent treatment containing dangerous substances	H4, H7, H10, H6	(H11, H6.1)	Art. 1 (1) b
04 02 20	Sludges from on-site effluent treatment other than those mentioned in 04 02 19			
04 02 21	Wastes from unprocessed textile fibres			
04 02 22	Wastes from processed textile fibres			
04 02 99	Wastes not otherwise mentioned			

19-09-2023

# **Example: Leather Industry**

EWL Code	European waste list (EWL) Classification	Н	н	Y
		(EU)	(Basel)	(Basel)
04 01	Wastes from the leather and fur industry			
04 01 01	Fleshings and lime split wastes			
04 01 02	Liming Waste			
04 01 03*	Degreasing wastes containing solvents without a liquid phase	H3, H6, H7	H4.1, H6.1, H11	Y6, Y9, Y42
04 01 04	Tanning liquor containing chromium			
04 01 05	Tanning liquor free of chromium			
04 01 06	Sludges, in particular from on-site effluent treatment containing chromium			
04 01 07	Sludges, in particular from on-site treatment free of chromium			
04 01 08	Waste tanned leather (blue sheetings, shavings, cuttings, buffing dust) containing chromium			
04 01 09	Wastes from dressing and finishing			
04 01 99	Wastes not otherwise specified			

### **Hazardous Waste Storage Area**

- large enough to hold quantities of hazardous waste generated between the usual pick-up dates or further scheduled times of disposal for the hazardous waste
- separately store different types of hazardous waste
- protected from sun and rain => Excessive heat might trigger a fire or explosion, while rain water might mix with residue of leaked chemical wastes and effuse/flow out, contaminating soil and groundwater
- provisions to contain any leakage or spillage => floor made of impermeable material or plastic sheets or lined with sheets as well as having provisions for containment / dyking

## Hazardous Waste Storage Area: Checklist

- Is all hazardous waste collected and move to a specifically designated storage area in your company?
- Is this storage area properly isolated from its surrounding as well as protected from exposure to sun and rain?
- Is this hazardous waste storage area clearly marked and access limited?
- Is the capacity of the area sufficient for the quantities of hazardous wastes generated and stored in your company?
- Are incompatible as well as liquid and solid hazardous wastes stored separately from each other?
- Is there an established hazardous waste collection schedule that ensure hazardous waste is not stored on-site for excessive periods of time?
- Is the hazardous waste storage area equipped with emergency equipment (such as suitable fire extinguishers, spill collection material/equipment)?

- Does the hazardous waste storage have provisions to contain leaks to soil and ground water (e.g. dyking, plastic lining)?
- Is ventilation provided to keep humidity, temperature and concentration of, dust, vapors and fumes at a low level in the storage area?
- Are the storage containers compatible with the hazardous waste they contain (e.g. corrosion resistant)? 

  Are all containers in good condition?
- Are containers kept closed at all times?
- Are the containers properly labelled allowing easy identification of content and hazards?
- Are containers inspected regularly for leaks and other defects?
- Are containers with leaks or defects immediately replaced?

### **Hazardous Waste Handling: Checklist**

#### **Organization**

- ls a designated person in charge of the hazardous storage area?
- Is a hazardous waste storage register (inventory) maintained and kept up-date?
- Are there specific working procedures and instructions for safe handling of hazardous waste and emergency measures?
- Have the workers, who are engaged in collecting and handling the hazardous waste, been instructed and trained on safe working and emergency procedures?
- Is suitable personal protective equipment available, which is specific to the type hazardous waste handled?
- ▶ Do the workers use designated personal protective equipment?

#### **Transport**

- Is the capacity of the transport vehicles adequate to the quantity of hazardous waste transported?
- Are the transport vehicles equipped with the necessary safety equipment (such as fire extinguishers, protective clothing, spill collection material/ equipment, etc.)?
- Are the transport vehicles clearly and adequately marked when transporting hazardous waste?
- Are the transport vehicles well maintained and clean (brakes, lights, tyres?
- Are the driver (and assistant) specifically trained and instructed in safety and emergency procedures?
- Is the routing for hazardous waste transportation specified?

## **Typical Quick Questions for Inspection**

- Does the facility have an up-to-date chemical inventory?
- Does the facility record quantities of chemical products used for each work order/production order?
- Does the facility regularly identify the quantity of chemicals lost due to accidents (e.g., spillages, poor labelling, accidental mixtures)?
- Does the facility have a document retention procedure that requires retention of key chemical inventory records for at least one year?
- Does your facility have a documented inventory of chemicals purchased (including your supplier's manufacturing locations), stored (including their location) and used at your facility?
