Background : Focus of NGO (Greenpeace, IPE) Campaigns

Residual Chemicals in Products

Dirty Discount Supermarkets:

Dangerous Chemicals in Supermarket Clothing

Greenpeace tests clothes and shoes for children and young adults sold by supermarkets and leading retailers

1. Summary of the results

Greenpeace tested clothing and shoes for kids and young adults for harmful substances in the summer of 2014. The products were purchased in supermarkets in Germany, Austria and Switzerland. In total, 26 samples were examined in independent laboratories.

More than half of the samples contained harmful substances in concentrations above the reference values and precautionary levels used by Greenpeace for children's clothing.⁹

Market Demand > Brand/Retailer Commitments

fashion. We have now achieved 80% ZDHC compliance of input chemicals. Our H&M Group goal is to reach 100% ZDHC compliance in 2020 — we call it Roadmap to Zero.

Requirements for input chemicals

The input chemicals policy was implemented in 2016 and comprises two essential components: Firstly, production facilities are required to maintain a chemical inventory and valid safety data sheet (SDS) for all chemicals used, which need to fulfil the ZDHC MRSL requirements, used. Compliance is proven based on

Achieving 100% sustainable input chemistry by adopting the ZDHC MRSL

Communication of requirements for the use of hazardous substances (MRSL list) to suppliers:

41 companies already achieved this target | **19** companies continue working on the target

Since 2015, we have focused on implementing the program with suppliers and aligning the RSSP with the ZDHC MRSL. We also have focused on utilizing other tools and trainings developed within the ZDHC

Validation via Assessments & Audits

7. Does your facility select and purchase chemicals based on their hazards and **MRSL** / RSL requirements?

If yes, do all chemicals purchased and used in production meet the facility's chemical purchasing policy?

If no, do you have a process or plan for eliminating chemicals that do not meet the facility's chemical purchasing policy?

COMMON TOOLS AND STANDARDS

Common tools to be used industry-wide, delivered through active collaboration.

2016-2017: In collaboration with ZDHC members on the delivery of work such as the ZDHC Audit Protocol, Effluent Guidelines and ZDHC **MRSL** for the textile and footwear industry.

its usage. GOTS has been following the system of MRSL for chemical inputs since inception.

Opportunities to support SDGs

From Detox to Roadmap to Zero

GREENPEACE
DETOX
CAMPAIGN

July 2011

- Sampled wastewater discharge at textile facilities in several countries in Global South
- Tested clothing purchased in brands' flagship stores
- Identified 11 Priority Chemicals that are discharged in wastewater & residual on end products
- Multiple brands committed to Detox commitment with "Zero Discharge by 2020" in mind

ZDHC INITIATIVE
FORMED

Q1 2012
Onwards

- "Zero Discharge of Hazardous Chemicals" was formed by 6 brands in response to address this challenge collaboratively
- Multiple brands began to join this initiative

ZDHC
FOUNDATION
FORMED

2015

- ZDHC was registered in Amsterdam in 2015 to deepen the programme & its engagement
- Developed a range of tools and guidelines to support an unified implementation approach
- Become a multi-stakeholder organization in which brands, retailers, suppliers, solution providers and chemical formulators are engaged

FROM FINITE TO
INFINITE GOAL

2020
Onwards

- Continue to converge the textile, footwear and leather approach on implementation to reduce duplication in the market
- Widen scope of development & deepen implementation in various geographical regions

OUR VISION is **widespread implementation of sustainable chemistry, driving innovations and best practices** in the textile, apparel, leather and footwear industries to protect consumers, workers and the environment.

From Multiple Requirements to One Aligned Global Framework

How does (ZDHC) Platforms, Guidelines & Solutions Relate to Your Supply Chain?

Supplier to Zero

HOW TO ZDHC

Evaluation

► Journey

Start improving today!

Suppliers learn how they do in benchmarking to the industry expectations set by the ZDHC Chemical Management System Framework and Technical Industry Guide

Guidance

► 150+

Templates, Documents and Recommendations

Based on the ZDHC Chemical Management System Framework, Technical Industry Guide and Best Available Technology (BAT)

Peer Learning

► Use Cases

Be encouraged by Suppliers leading in implementation

The platform offers use cases prepared by experts and offers Suppliers to submit their own for review

SUPPLIER

to Zero

By Ø ZDHC

The entry point to sustainable chemical management for suppliers of all types

Self-evaluation based on the ZDHC CMS Framework

The Foundational Level provides more than 150 hands-on industry standard and best-practice guidance based on ZDHC CMS TIG.

Get a Foundational Level certificate after completion of the implementation

The screenshot displays the 'Supplier Platform' interface. On the left is a navigation menu with options: Dashboard, Supplier to Zero, Evaluation, Recommendations, Library, and Certificates. The main content area is split into two sections:

- WELCOME TO THE SUPPLIER PLATFORM:** A header section with a blue background and white text. Below it, a 'YOUR PROGRESS REPORT' section features a donut chart. The chart shows a small blue segment representing 'Implemented' and a larger grey segment for 'Not implemented'. Text above the chart reads 'Current Level in progress: Foundational'.
- LIBRARY:** A section titled 'Foundational' with the subtitle 'Have a look at the Guidance Sheets and Improvement resources provided for the Foundational Level.' It contains a table of resources with columns for 'Input', 'Process', and 'Output'. A modal window is open over the table, displaying a document titled 'Manual Handling Spillages' with the ZDHC logo and a blue header. The document content includes sections for 'Plan and prepare for spillage response', 'Evaluate and handle spills', and 'Deal with a spillage made visible'.

At the bottom of the screenshot, there is a small preview of a 'Recommended Elements of an Spillages Control Plan' document.

Accessing the Supplier to Zero platform

- 1 Get access to ZDHC Gateway!**
Fill in the ZDHC Gateway application form.
(<https://bit.ly/GetGatewayAccess>)
- 2 Register to ZDHC Gateway**
- 3 Set the Gateway Supplier Profile first!**
- 4 Go to Supplier to Zero**

Use Cases

By Ø ZDHC

Use Cases (already online)

Suppliers can not only read best-practice and practical implementation use cases, they can also submit their own. The SZZ team performs a quality review before the Use Cases get published to other users on the platform.

RCA / CAP

By Ø ZDHC

RCA / CAP (coming soon)

This solution/ module will support suppliers in working on fails in WW with an optimized guidance and related recommendations. A standardized methodology ensures Brands' trust in resulting RCA/CAP documentation.

Resource Efficiency

By Ø ZDHC

Resource Efficiency (coming soon)

It will address the ZDHC commitment to the goals set by UNFCCC. Based on the former CPI2 platform, brand contribution and own development, the IHUB will provide a module that supports tier 2 suppliers in achieving climate goals.

Man-made Cellulosic Fibre

By Ø ZDHC

MMCF (coming soon)

The MMCF solution/ module will enable suppliers to report on their ZDHC MMCF Guidelines implementation goals.
